

The Electrimeca is one of the most reputable national authorities in the construction, installation and servicing of pumping systems. We offer our products and services nationally and internationally.

It was founded in 1973 in Cascais, with the aim of producing electrical panels for pumping systems. During the first two decades has grown as a small company, and the last half decade as a medium enterprise.

The innovation of our systems have been monitoring the automation industry, bringing the advantages of using these new technologies, to join our client.

In Portugal, the first booster with a velocity change was designed and conducted by ELECTRIMECA and man, for a decade, some of the main buildings of Lisbon and Porto, where the quality is constituted as a top priority.

Having been a pioneer in this field, ELECTRIMECA consolidated experience and technological capacity needed for water pressure and demonstrated its ability to innovate technologically depending on the welfare of society, in line with European standards.

Our team of construction, installation and support elements are constituted by young dynamic and innovative, providing the best workmanship, with the best quality.
